-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 3,220,205 to Breeding in view of U.S. Patent No. 1,977,608 to Blystone. Breeding discloses the claimed invention of an icemaker with an ice making section and an electric heater 44. However, Breeding does not disclose the insulation between the heater and the ice making plate. Blystone teaches an ice mold with an electric heater 15 and insulation 14 between the mold and the heater. Thus, it would be obvious to provide Breeding with insulation between the heater 44 and the ice making plate, in view of Blystone, to yield the predictable result of controlling and reducing the amount of heat from the electric heater to the plate. The type of heater used is considered to be a matter of obvious choice to one of ordinary skill in the art. Film-type heaters per se are well known in the art. No criticality or unexpected results are seen or have been disclosed for the use of film-type electric heaters. Furthermore, one of ordinary skill in the art would have expected a film-type heater to work equally as well as the heaters disclosed in either Breeding and Blystone. Also, the recitation of the insulating layer being bonded to the metal plate by thermocompression is considered to be a method of assembling step which does not have patentable weight in an apparatus claim. The insulation taught in Blystone is capable of being applied by means of

thermocompression. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
